

# BRISTAN

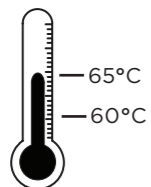

## Installation Instructions & User Guide

Please leave these instructions  
with the end user

Product Code: SM 3/4 C (D6)

### Specifications

#### Maximum Inlet Temperature

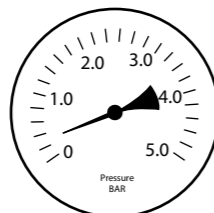

60-65°C Recommended

#### Dynamic Water Pressure

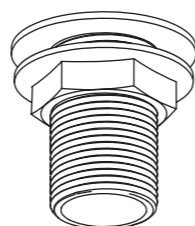

Min: 0.2 bar

Max: 5.0 bar

Maximum Static Pressure: 10.0 bar

#### Inlet Connections

3/4" BSP

### Tools You'll Need

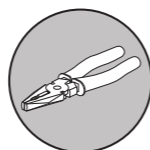

Pipe Cutter

Adjustable Spanner

Crosshead Screw Driver

Pliers

### Prior to Installation

All products manufactured and supplied by Bristan are safe to use provided that they are installed, operated and receive regular maintenance in accordance with these instructions.

This product needs to be installed in accordance with, and meet the requirements of the Water Supply (Water Fittings) Regulations 1999 and current by-laws. For full Installation Requirements & Notes (IRN) please visit [wras.co.uk/directory](http://wras.co.uk/directory).

Isolation valves must be fitted to the inlet water supplies to ensure ease of future maintenance.

Before installing this product the water supply must be thoroughly flushed in order to remove any swarf, solder etc.

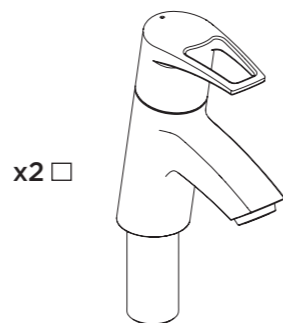

This product must not be modified in any way as this will invalidate the guarantee.

Full access must be made available for future maintenance/servicing purposes.

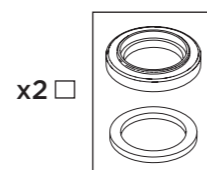

If in doubt, contact a registered plumber or your Local Water Authority or the Secretary of the Institute of Plumbing, address as follows:-

The Institute of Plumbing,  
64 Station Lane,  
Hornchurch,  
Essex,  
RM12 6NB, Tel: 01708 472791

### Spare Parts

To replace any spare parts  
for your tap, why not  
scan the QR Code or  
visit [www.bristan.com](http://www.bristan.com)  
and search for your product.

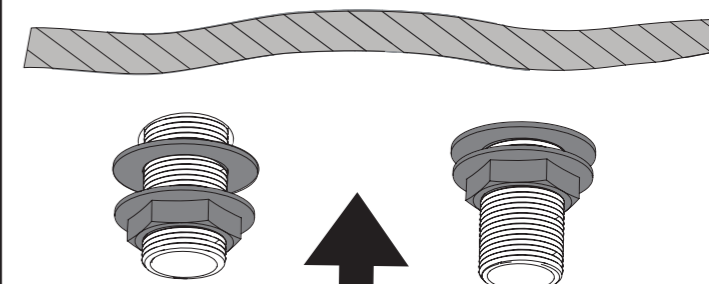

### Installation

1

Fit the taps to the bath, ensuring  
the plinth is in place.

2

Secure the taps to the bath by  
using the washer and metal  
backnut below the bath.

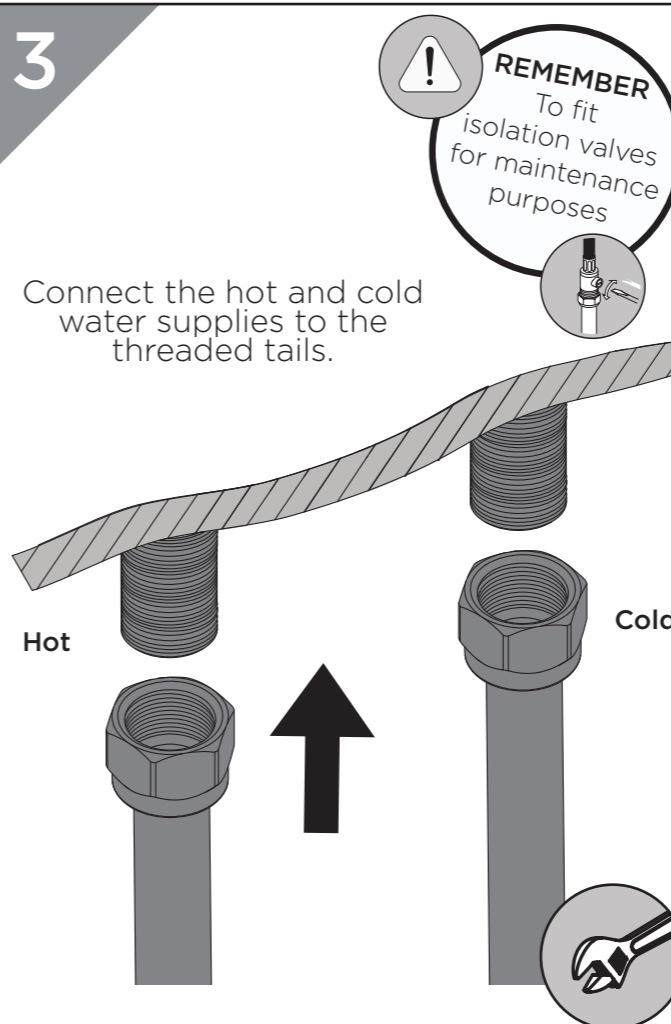

### Servicing Your Tap

We recommend servicing your tap at least once every year to prolong its life. To see a video showing how to remove the cartridge for servicing, scan the QR code with your smart phone or tablet.

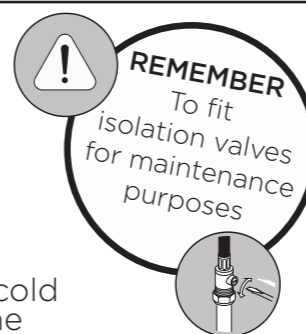

Alternatively visit [www.youtube.com/BristanTV](http://www.youtube.com/BristanTV)

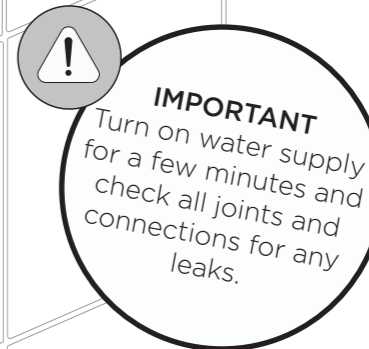

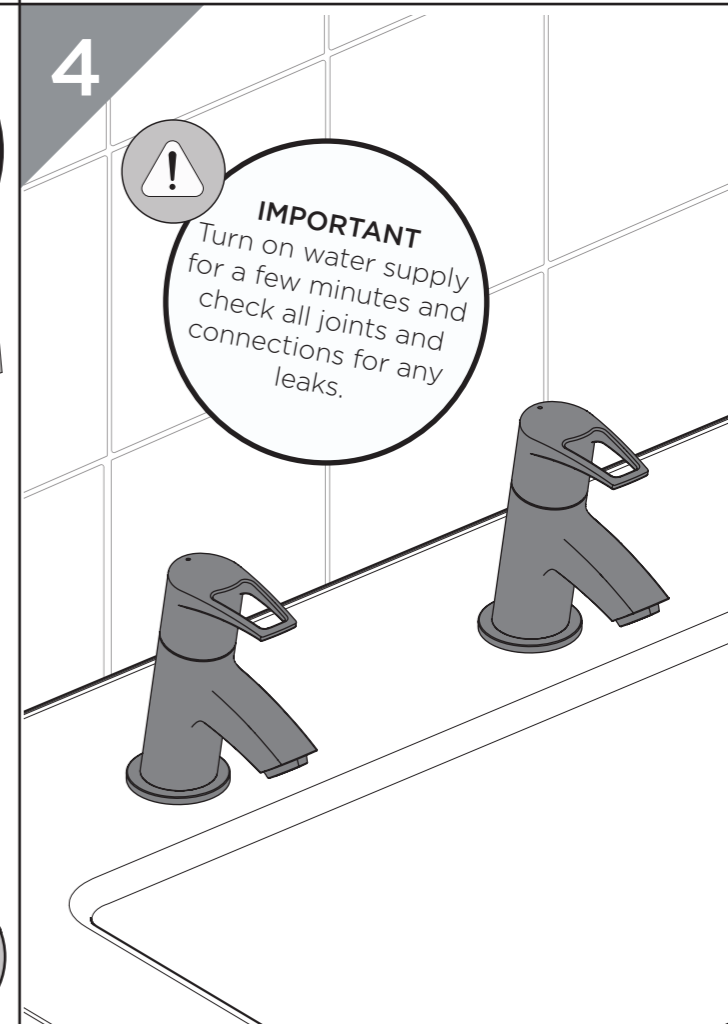

3

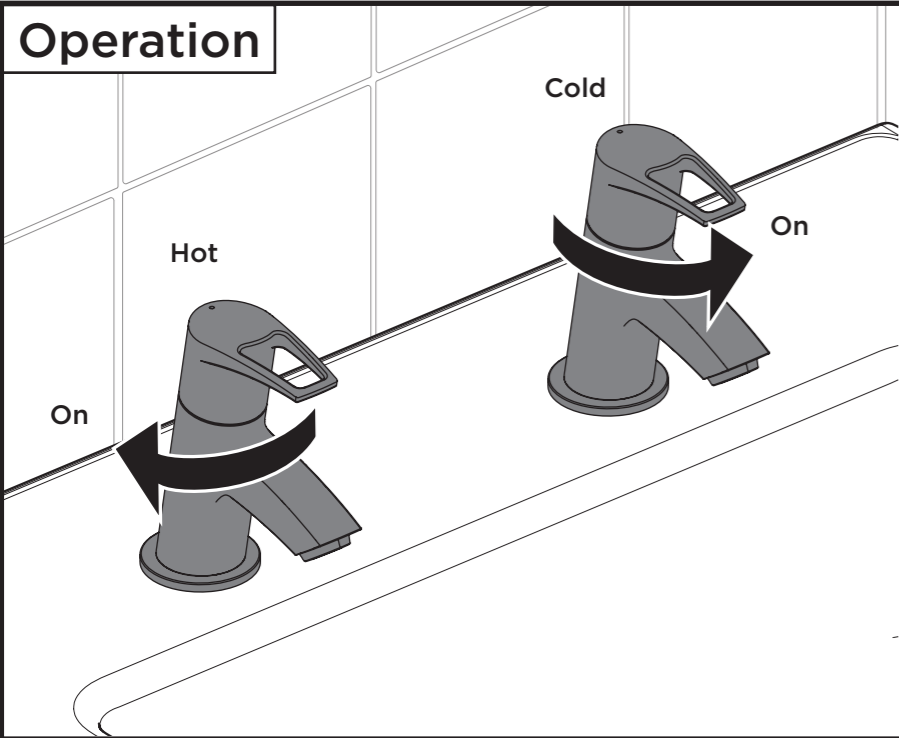

Connect the hot and cold  
water supplies to the  
threaded tails.

## General Cleaning

Bristan products are made from premium materials, with hand polishing and electroplated finishes.

Your taps or shower should be regularly cleaned with warm water, a mild pH-neutral liquid soap, and polished with a soft cloth. Any residues from soap, toothpaste, shampoos and shower gels can cause blemishes if not rinsed off straight after use.

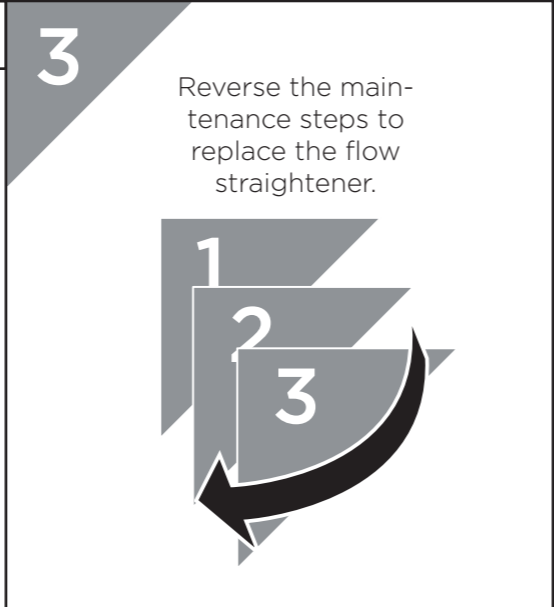

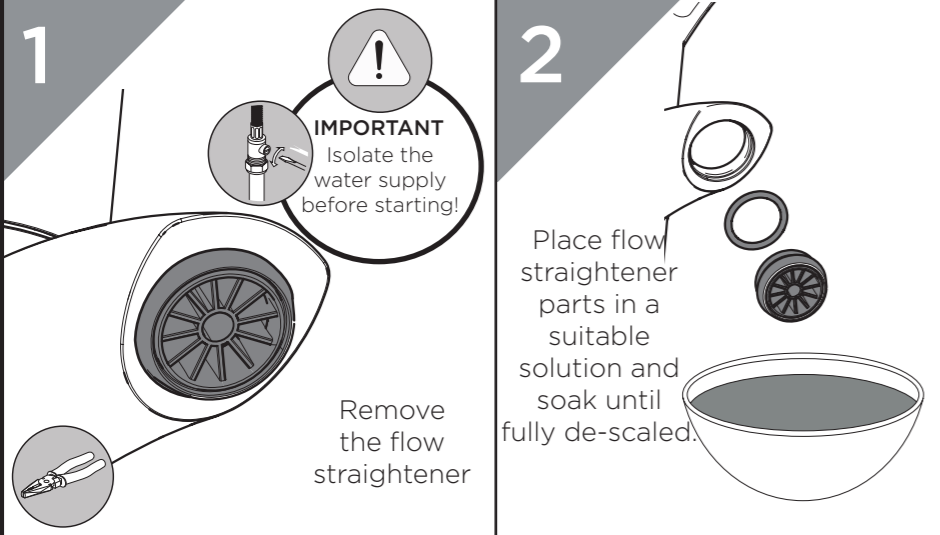

Household bleaches and cleaners contain harsh chemicals and may damage the surface finish. Avoid using abrasive cloths, scouring pads, scrub sponges, steel wool or anything similar.

Some surfaces such as nickel and pewter may be affected by the dye found in some cloths, so it is also important to avoid hanging cloths on spouts.

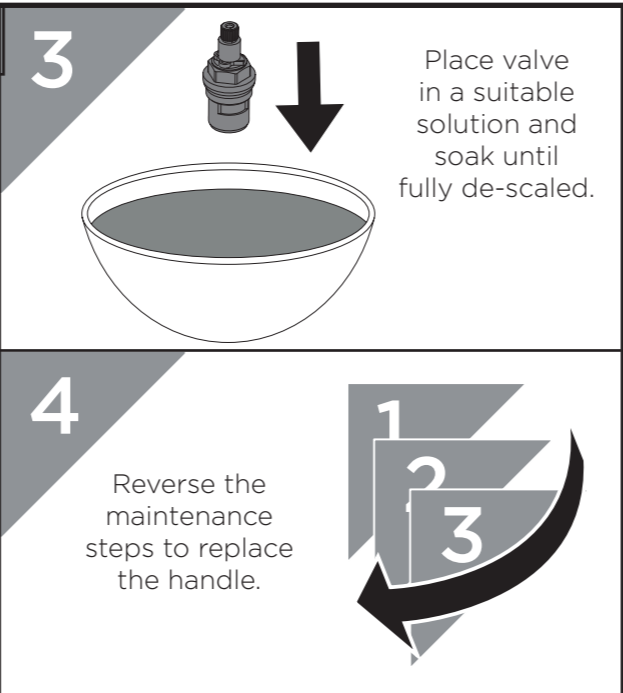

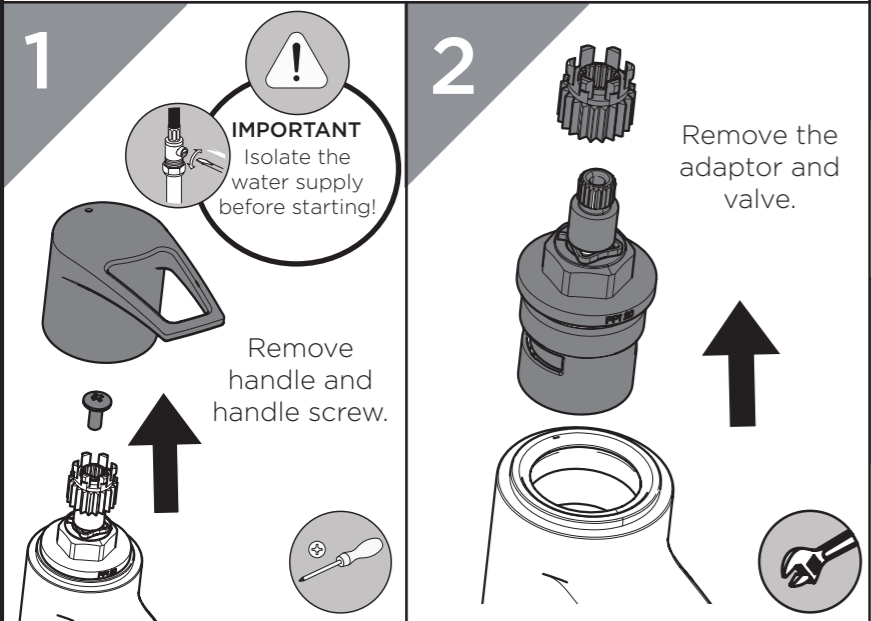

## Troubleshooting

| Symptom                  | Cause   | Remedy   |
|--------------------------|---|--|
| No flow or low flow rate | Partially closed isolation valve.   | Open isolation valve.  |
|                          | Instantaneous water heater cycles on and off as flow rate or pressure is too low.                                 | Increase water flow rate or pressure through system.                                     |
|                          | Head of water is below the minimum distance required.   | Refer to specification for minimum distance required.                                    |
|                          | Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes. | Do not use other water outlets when using the taps.                                      |
|                          | Airlock or partial blockage in the supply pipework.   | Flush through pipework to ensure removal of debris and any airlocks.                     |
| Water dripping from taps | This is normal for a short time after using the taps.   | This is caused by residual water tension, the build up of water in the tap body.         |
|                          | If water continues to drip, possibly due to the ceramic disc valves   | Remove valves and clean, refer to 'Maintenance' section before starting any maintenance. |
| Taps do not turn on      | Closed isolation valve.   | Open isolation valve.  |
|                          | Mains water supply turned off.  | Turn on mains water supply.  |
